ABSTRACT:

PROBLEM TO BE SOLVED: To perform a warning display when the real working time of a personal computer reaches its prescribed level.

SOLUTION: The real working time of a personal computer is calculated every time a screen saver is executed within a fixed period by a timer 13, an execution/non-execution detection means 11 and a real working time calculation control means 12 in regard to the timer 13 where the working time of the personal computer is updated. When the

calculated working time of the computer reaches its prescribed level, a warning display is performed. In such a case, the user of the personal computer can take a proper measure to maintain and manage his own health.
